

PASSION, PERFECTION, AND DEDICATION...

PASSION BEHIND EACH DETAIL THAT LASTS THRU TIME

For over 70 years Fontana de Trevi, S.A. is manufacturing with precision, dedication, and perfection high quality handcrafted caskets beautifully designed, built, and finished. Founded in Italy in the 40's, the company has learnt, over the years, how to improve to the changing demands of design and engineering to produce for the different countries, markets, cultures, and religions.

Fontana de Trevi, S.A., is a family owned company started in Italy in the 40's; since then, it has been exclusively dedicated to the production of high quality wooden caskets. In 1990, the founding partners decided to move production to Guatemala, Central America, allowing the use of a variety of high quality wood species.

Fontana de Trevi has a 160,000 - square -foot building on a 10- acre land property. The company has a warehouse to store 600,000 bd.ft. of production, three kiln dry ovens for wood drying with a capacity for 90,000 bd.ft., plus over 120 collaborators as experienced human resources.

Its long experience in the industry and its technological capacity has allowed Fontana de Trevi to produce high quality handcrafted wooden caskets for each market niche. The company has cutting-edge italian technology, a wide variety of designs made with the best raw materials, and highly skilled Guatemalan labor. Fontana offers its clients the flexibility to manufacture a custom made product from the design to the selection of wood, fabrics, and finishes.

OUR COMMITMENTS

Commitment with its Values

Fontana de Trevi is located in an area with a cluster of companies in the wood industry with excellent availability of wood materials and surrounded by people with a high labor experience and ethics. These conditions provide the capacity to offer its clients more options, better raw materials, and years of experience in casket manufacturing that end in cutting-edge high quality products at competitive prices.

Commitment with Excellence

The products are carefully inspected throughout the manufacturing process to ensure that it meets the quality standards and requirements of its customers. Fontana has built his business, reputation, and relations with its clients thanks to its commitment with excellence. The Company is committed with quality, on-time-delivery, and meeting its obligations with government entities, customers, suppliers, and employees.

Commitment with the Community

Italians of nationality, and Guatemalan residents, the founders of Fontana de Trevi possess a deep understanding of the culture and commitment to the surrounding community. The company operates and complies with all health and safety labor laws for the benefit of its employees and society in general. The Company also provides financial assistance to its employees and aids the Guatemalan Burned Children Foundation donating a percentage of its monthly sales.

Commitment with the Environment

Fontana de Trevi is a leader in Guatemala in the promotion of environmentally friendly practices. Operating with respect to the country's environmental laws, the company is committed to the use of harvested woods in a sustainable way authorized and supervised by the Forestry National Institute (INAB). The company also imports woods from USA plantations from suppliers committed to environmental sustainability policies.

In the year 2013 the company launched its first phase of installing a photovoltaic plant. Today, the plant has saved 460 Mwh and prevented around 350 tons of CO₂; offers its clients a low-impact environmental production.

All varnishes used are imported from Italy from the recognized brand ILVA from Group IVM Chemicals; which is the largest and more advanced brand in Europe in production and technology of coatings and polymers. All of its products are of the highest quality and respond to European regulations.

The construction methods used in the caskets take into consideration the value of the raw materials maximizing the resource used.

Commitment with its Employees

Fontana de Trevi understands the value added that the employees working in the company generates, being them the essence of the company. It is through joint efforts among employer and employees that dreams come true. Fontana de Trevi invites you to make a personal visit and experience the important element of their human touch.

ITALIAN TECHNOLOGY DEVELOPED AND PERFECTED OVER 70 YEARS OF EXPERIENCED

Product Characteristics

70 year of family tradition and experience in the manufacturing, engineering, and construction of Italian technology allows Fontana de Trevi to produce caskets of the highest quality for each market. The company offers a wide variety of designs elaborated with the best raw materials, cutting-edge technology, and highly specialized labor.

Production Flexibility

Fontana manufactures custom made products; from the selection of the design and wood, to the selection of fabrics for the interiors and finishing types.

Its experience in the sector and technological capacity allows them to produce handcrafted high quality caskets in three important markets served through decades such as Italy, Northern Europe, and Latin America. Currently, the company is making important and strategic efforts to penetrate the United States markets.

Technical Specifications

For the proper elaboration of each casket, Fontana carefully selects the best woods of Central America and the United States.

The company uses a kiln drying process in specialized ovens to guarantee that the selected wood will keep its natural firmness, desired moisture content, and stability of the final product; avoiding future possible deformations.

A unique construction and assemble process is conducted that has been carefully designed and perfected by decades to guarantee that the original form will last through the passing of time; maintaining a beautiful and detailed casket.

Perfect Corners

- Perfect cuts are made with high speed and precision machinery to secure that the surfaces will match to perfection.
- Two channels in "T" form are produced to guarantee a better resistance when compared to straight channels used by the competition.
- The corners are fixed with plastic souls specifically designed for Fontana to perfectly fit in the "T" channels.

Precise Assembly and Resistant Joints

- All joints in the caskets production are made with a high performance technical system that guarantees a higher bite and mechanical resistance.

- The technology and quality standards used by the company are able to reach a complex assembly, even in the dome curved part of the casket, especially for the USA market; being this one of the most critical aspects of the top engineering providing a high stability.
- Often one can observe in the caskets of other manufacturers splits and cracks in critical areas of the casket as they only join the parts with metal attachments that will give up with time. These joints show break lines, joint separation, and rupture of the varnish film.

The Quality Control tests conducted by Fontana includes 75 days of extreme conditions, exposing the caskets to high and low humidity's and temperatures including direct exposure to the sun. The results show that the joints do not split and the finishing remains intact.

Differently than other manufacturers, Fontana uses in its caskets a solid wood bottom made with Yellow Pine with a 1" final minimum thickness; guaranteeing a higher resistance to humidity and carrying capacity.

At the same time, the company uses a unique system to join the bottom of the casket embedded at the time of the assembling and tightening it to the molding in all its perimeter; providing a high stability and durability.

The bridges that hold the tops are made out of one single piece; it is jointed to the lid before they are divided into two parts or halves, obtaining a much better esthetic and structural result.

Rubber Gasket

Fontana de Trevi uses a rubber gasket on the entire surface supporting the top, securing a smoother closing, and protecting the varnish film in an elegant manner.

Excellence in the Finishing

Fontana de Trevi is particularly an expert in the surface treatment of the wood making finishes of the highest quality worldwide. The wood is carefully and delicately polished in each corner of its beautiful caskets perfecting its appearance, keeping their smoothness to the tact, and providing a high resistance and durability.

Fontana de Trevi imports and uses only products of the Italian company ILVA of the IVM Chemicals Group. Their varnishes and dyes are of the highest quality manufactured with European standards that are friendly to the environment, health and safety to the collaborators.

To apply the varnishes, the company uses cutting-edge equipment of Italian technology such as pressurized rooms in clean states, with absence of dust and pulverization windless

systems, to assure the absence of air bubbles and a perfect finished film.

Fine Interior

The interior is finished with high quality satins and/or velvet fabrics that enfold all the interior of the casket. The designs are clean, elegant, and hand stitched by experienced hands that carefully look after every detail; finishing with a soft and comfortable sensation.

Accessories

Each accessory has been carefully chosen and used to embellish each casket guaranteeing functionality, reliability, accessibility, and durability.

Geographical Position

Guatemala is located in a strategic geographical position very favorable for shipping to the whole American Continent. Ocean transit times vary between 3 to 15 days to any destination in the USA depending on carrier, shipping ports, and selected route.

Upon approval of Purchase Order, the manufacturing process and delivery time is 8 to 10 weeks for the first order. The company

offers storage services as per customer instructions for just-in-time inventories and immediate delivery. This possibility offers the customer the reduction of their inventories to the minimum levels and storage space; resulting in interesting financial advantages.

Available Woods

American Aromatic Cedar (*Juniperus Virginia*)

American Cherry (*Prunus serotina*)

American Pecan-Hickory (*Carya sp.*)

American Poplar (*Liriodendron tulipifera*)

American Red Oak (*Quercus rubra*)

American Yellow Pine (*Pinus Palustris*)

Guatemala Mahogany (*Calophyllum brasiliense*)

Paulonia (*Paulownia tomentosa*)

Western Cedar (XXXXXXXXXX)

All American Hardwoods are imported from qualified and renowned USA suppliers. Therefore, any American Hardwood could be used. Local suppliers have also been carefully selected and qualified.

DIMENSIONS						
CODE	EXTERIOR DIMENSIONS INCHES			INTERIOR DIMENSIONS INCHES		
	WIDTH	LENGTH	HIGHT	WIDTH	LENGTH	HEAD AVAILABLE SPACE
0100, 0103, 0104, 0105 & 0106	27"	80 3/4"	23 5/8"	24"	77 1/2"	17 5/16"
ALL OTHER CODES	28 3/4"	82 1/4"	23 5/8"	24"	77 1/2"	17 5/16"

Every effort has been made to accurately represent the casket on this catalog. Actual product may vary slightly in finish and design.
This product is designed for interment. For cremation, metal components need to be removed.

We are willing and capable of making other models and use other especies upon request and further evaluation.
